THE PROGRAM
The Master's Degree in Disability Studies (M.A.), the first stand-alone program of its kind in the country, offers students a unique opportunity to examine disability from an interdisciplinary perspective, including the social sciences, humanities, science, social policy and the law. The program utilizes a ‘person centered’ approach to the study of disability, incorporating overlapping lenses through which students realize disability as a social construction as opposed to a deficit inherent in an individual.

The degree provides students with the intellectual and methodological tools to assume greater responsibility and leadership in the future as service providers, advocates, researchers, or policy makers. Students study with renowned faculty from CUNY as well as expert practitioners from public and private organizations.

Graduates of the Master's Degree in Disability Studies program are reflective, knowledgeable and flexible professionals, researchers, educators and advocates in their chosen disability-related field. Graduates think, write and speak critically about:

- Disability experience, both individual and social;
- Disability and the arts/creativity in disability culture;
- Improvement in quality of life and justice for people with disabilities;
- Field based applications to disability-related practice; and
- Research for ongoing learning and writing in disability studies.

Career Prospects
The Master's Degree in Disability Studies prepares a new generation of leaders in community-based or governmental agencies as they evolve in the 21st century. It prepares students to begin or further a career working with and for people with a wide range of disabilities and is ideal for administrators, social service professionals, educators, scholars who wish a specialization in Disability Studies, people with disabilities or family members, and advocates.

Admission Criteria
In addition to the admission criteria for graduate degree programs, background as a human services professional, advocate, researcher or policy maker is an advantage, but not essential. Individuals with disabilities are encouraged to apply.

CURRICULUM
Students of the Master's Degree in Disability Studies (M.A.) are introduced to the social model of disability and are challenged to think critically about disability in relation to a variety of academic disciplines and society. Through intense coursework and fieldwork, students explore the phenomenon of disability in depth, gain new insights and skills, and become part of a growing community in this exciting field.

Program Requirements
Thirty credits are required for the degree.

Required Courses - Students must complete 18 credits in the following courses:
- DSAB 601 - Psychosocial, Cultural and Political Aspects of Disability
- DSAB 602 - Embodiment and Disability
- DSAB 605 - Disability and Diversity
- DSAB 611 - Research Methods
- DSAB 626 - Disability Law and Policy
- DSAB 699 - Capstone Course

Elective Courses - Students must also complete 12 credits from among the following courses:
- DSAB 603 - Disability and the Family Life Cycle
- DSAB 620 - Disability History
- DSAB 621 - Disability Studies and the Humanities
- DSAB 622 - Disability in Mass Media
- DSAB 623 - Disability Studies and the Health Professions
- DSAB 624 - Disability Services Administration
- DSAB 627 - Disability and Narrative
- DSAB 628 - Disability Studies in Education
- DSAB 629 - Students with Disabilities in Higher Education
- DSAB 630 - Aging and Disability: Multiple Perspectives and Emerging Issues
- DSAB 639 - Fieldwork in Disability Studies
- DSAB 649 - Independent Study
- DSAB 651 - Special Topics Course

COURSE DESCRIPTIONS

DSAB 601  Psycho-Social, Cultural and Political Aspects of Disability  3 Credits
Prerequisite: None
This course is an introduction to the emerging multidisciplinary field of Disability Studies. Students will engage disability in a variety of sociopolitical and cultural contexts, including their own personal values and beliefs as they relate to disability and society. Students will be introduced to Disability Studies theory, vocabulary and the models that frame disability discourse. Students will examine Disability Studies as it emerged from the Disability Rights Movement, explore disability in art and literature, investigate and critique current systems of care as they relate to self-determination and inclusion, analyze the role of poverty and work, explore disability as it intersects with race and gender, and learn about disability in a global context.

DSAB 602  Embodiment and Disability  3 Credits
Prerequisite: None
This course focuses on issues related to embodiment and the biological and medical aspects of disability. Students who complete the course will be knowledgeable about: the relationship between Disability Studies, medical sociology and the concept of the “lived body;” the difference between an understanding of the disabled body as a social construction and as a medical problem; the health care needs and experiences of people with disabilities; public policies related to the access of people with disabilities to quality health care; identification, prevalence, clinical manifestations, cognitive, behavioral and social implications and interventions associated with genetic causes of disabilities and acquired disabilities due to traumatic events; the relationship of Disability Studies and bioethics in areas such as prenatal testing, the genome project and assisted suicide; the value and possibilities of non-verbal communication and sign language to improve the quality of life of people with sensory disabilities; language development and educational options for children with cochlear implants; modes of communication with individuals with hearing impairments and other sensory disabilities; advances in our understanding of issues related to the sexual life of people with disabilities; the value of universal design and the physical accessibility of the built environment to people with disabilities and the broader community; and the potential for assistive technologies to improve the quality of life of persons with impairments and disabilities.

DSAB 603  Disability and the Family Life Cycle  3 Credits
Prerequisite: None
This course focuses on disability viewed from the perspective of lifespan development and the family life cycle. Students who complete the course will be knowledgeable about: the relationship between Disability Studies, lifespan developmental psychology and the sociology of the family; the use of autobiographical narratives and personal accounts by people with disabilities to address critical issues across the life span; the experience of parents and siblings of a family member with a disability; the pervasiveness of Ableism in the American educational system and its deleterious impact on educational outcomes of children with disabilities; characteristics of successful inclusion efforts, and the relationship between inclusion and school reform; self-determination and family involvement in the transition from school to adult life for youth with disabilities; family life of adults with disabilities including marriage, parenting, caring for aging parents and the death of parents; the importance of social networks in the lives of people with disabilities; approaches to challenging behaviors including autism, and individuals dually diagnosed with intellectual disabilities and psychiatric disorders; use of applied behavioral analysis (ABA) in the treatment of challenging behaviors; the negative impact of stigma on individuals with mental illness and family members and on the delivery of quality mental health services in the community; behavioral and mental
health changes associated with aging adults with intellectual disabilities; and using person-centered planning and self-advocacy to improve the quality of life of aging individuals with disabilities.

**DSAB 605**  
**Disability and Diversity**  
3 Credits  
*Prerequisite: None*  
This course focuses on disability as a category of diversity and identity in comparison with other categories of diversity and identity, such as race, class, gender and ethnicity, as well as on diversity within disability. It also critically examines different strategies that may be used to increase the freedom or liberty of people with disabilities. Disability as culture will be explored, as will systems of exclusion or disadvantage as they intersect with disability and other categories of diversity.

**DSAB 611**  
**Research Methods**  
3 Credits  
*Prerequisite: None*  
This course will provide an overview of research methods including participant observation, in-depth interviewing, the use of personal narratives and other personal documents, and participatory action research. Students will be introduced to data analysis in disability research. The course will feature theoretical approaches and practical techniques. The application of these research methodologies to people with disabilities will be illustrated. The book for the course will be the classic disability research text *Introduction to Qualitative Research Methods* by Stephen Taylor and Robert Bogdan; additional readings will be utilized as well to complement the text. Students who complete the course will be able to: discuss the ethics of studying people and the special protections required when studying vulnerable populations; describe situations where approval is needed from the Institutional Review Board and the steps to secure IRB approval; contrast and compare quantitative and qualitative research methodologies and describe research scenarios where each would be appropriate; discuss various methodologies utilized to conduct qualitative research and describe the attributes of each; describe his or her experience in practicing various qualitative research methods and what he or she learned; participate in participant observation and write field notes describing it; describe the benefits of reflexive journaling while conducting research and issues around the biases we bring to research; conduct interviews with individuals and code them for content; analyze the results of participant observation and interviews research; develop a structured questionnaire; describe issues related to writing about research; contrast and compare several qualitative research studies; describe an area of investigation and develop a research question which addresses it; conduct a literature review and identify gaps in research; formulate a research proposal and present it to peers.

**DSAB 620**  
**Disability History**  
3 Credits  
*Prerequisite: None*  
This course focuses on some of the Western, pre-modern notions of disability, such as the sacred and the profane and the ugly and grotesque, inherited from classical antiquity and Christianity. The course also constructs a history of persons with disabilities in the U.S. by concentrating primarily on the modern era beginning with institutionalization in the Jacksonian and Civil War eras. The course reviews the history of persons with disabilities, highlighting the so-called hierarchy of disabilities. The course also examines why social history, the history of everyday lives that is the dominant methodology among historians, has scarcely been applied to people with disabilities until the advent of Disability Studies.

**DSAB 621**  
**Disability Studies and the Humanities**  
3 Credits  
This course will provide an introduction to disability studies and the humanities. Over the last twenty years disability scholars have analyzed representations of people with disabilities as they appear in literature, myth, art, film, photography, music and theater. These fields reflect and shape the meaning and reality of disability. Poetic and other artistic modes of discourse can deepen our understanding of the lived experience of disability. However, these shared representations of disability are, for the most part, taken for granted. Yet they have a powerful effect on popular culture, influence the attitudes and behaviors of individuals and play a part in the formation of public policies related to disability. The course will provide in-depth analysis of: the image of the cripple in literature; women with disabilities in fiction and drama; the idiot figure in modern fiction and film; the roles and stereotypes of disabled figures in cinema; theorizing disability in music; the history of photography and psychiatry; images of madness in literature; people with disabilities as artists and performers; representations of people with disabilities in journalism, media and popular culture.

**DSAB 622**  
**Disability in Mass Media**  
3 Credits  
*Prerequisite: None*  
This course focuses on issues related to disability and mass media representation, including journalism, TV, film, advertising, photography, documentary, comic art and the Internet. Topics covered will include:  
- The relationship between disability studies and media studies;
- The various models of media representation of disability;
- The impact of stigma in mass media imagery;
- Mediated bodies – the impact of cultural and media representations on the experiences of people with disabilities;
- Disability media, i.e. content created by and for people with disabilities;
- Content and textual analysis – researching the prevalence and meaning of mediated disability representation;
- News about disability rights in U.S. society, what is and isn't covered; and
- “Hidden” disabilities and how they do or don’t get onto the media’s radar.

DSAB 623  Disability Studies and the Health Professions  3 Credits
Prerequisite: None
This course will focus on health disparities experienced by people with disabilities. Many health professionals have the same misconceptions and fears about persons with disabilities that are found in the general public and physical barriers still exist in many, if not most, health delivery settings. The course will review the Declaration on Health Parity for Persons with Disabilities issued by the AAIDD. It will review the research on health disparities documented by the Baylor College of Medicine’s Center for Research on Women with Disabilities and other sources. We will look at ongoing efforts to address these problems. Both the 2005 Surgeon General’s Call to Action to Improve the Health and Wellness of Persons with Disabilities and the Institute of Medicine’s 2007 report on the Future of Disability in America, stress the importance of strengthening the education of health professionals in this area. Indeed many health professionals still equate disability and illness. The strengths and weaknesses of the International Classification of Functioning, Disability and Health of the World Health Organization as a conceptual framework for disability will be discussed in detail. The relationship between disability studies and the emerging patient-centered approach will be highlighted. The role of disability studies in the education of health professionals will also be discussed including the integration of narrative medicine into the curriculum of medical schools and the practice of physicians. We will also look at the challenges faced by health professionals with disabilities.

DSAB 624  Disability Services Administration  3 Credits
Prerequisite: None
This course looks at the role that Disability Studies is playing in the formulation of public policies to insure the delivery of quality services and supports to people with disabilities. The course analyzes the costs of these services and the economics of the disability industry. It focuses also on organizational factors involved in the management of public and private agencies that deliver services to people with disabilities. The active participation of people with disabilities and family members in the design, delivery and evaluation of community-based services is emphasized.

DSAB 626  Disability Law and Policy  3 Credits
Prerequisite: None
This course examines how the federal government treats discrimination against persons with disabilities in three areas: public life (public accommodations, such as transportation and housing), education, and private life in terms of employment. Divided into three parts, the course first examines the origins of the disability rights movement and the ways this movement contributed to the drafting of these anti-discrimination disability laws. Second, it reviews the statutes themselves—Section 504 of the Rehabilitation Act of 1973, the Individuals with Disabilities Education Act (IDEA), and the American with Disabilities Act (ADA), as well as how federal courts have interpreted them. The course will also analyze how these laws are enforced. It will pay special attention to how these laws compose a public policy. Finally, the course concludes by reviewing how the ADA has influenced the United Nations which recently passed its own disability rights laws.

DSAB 627  Disability and Narrative  3 Credits
Prerequisite: None
This course focuses on the individual, cultural, social and political meanings of disability as seen through the eyes of people with disabilities themselves. It does so by studying powerfully and elegantly written memoirs and narratives by authors with different disabilities or those that have been intimately involved with those with disabilities. The course is divided into two parts. First, it explores some conceptual issues to help place “life writing” in a Disability Studies context. For instance, how do people with disabilities identify themselves? How is their identity perceived by society? What is “normal?” What types of discrimination do people with disabilities face? And second, this course reviews a number of narratives, focusing on these specific questions.

<td>This course provides an overview of dis/ability within education. We will foreground historical, social, cultural and interpretive understandings of dis/ability, contrasting them with the medical, scientific, and psychological understandings of dis/ability within the context of schooling practices. Using personal narratives, media representations, contemporary research, historical accounts, legal and policy issues, we will analyze competing claims of what dis/ability is. By analyzing multiple and interdisciplinary understandings of dis/ability from a wide variety of sources, we are able to deepen our understanding of dis/ability issues within education, and by extension, society. Students will: be introduced to, or extend their knowledge of a dis/ability studies perspective; explore various ways of understanding dis/ability (medical model, social model, charity model, civil rights model, etc.); explain the value of understanding school and classroom practices through a DSE lens; examine the history of schooling for students with and without dis/abilities; describe the differences between traditional special education and a DSE approach to understanding dis/ability; debate the validity and/or usefulness of dis/ability categories that have been constructed within the education field, such as “learning disabilities,” and “emotional disturbance”; analyze complex issues involved in inclusive education; discuss negative social perceptions, ableism, stigma, and discrimination experienced by people with dis/abilities within an education context; explain discrepancies in educational opportunities when dis/ability intersects with race, class, and gender; evaluate the experience(s) of dis/ability for urban students; consider schools as work environments for educators with dis/abilities; discuss major longitudinal and outcome studies and examine factors related to successful transitions for students with dis/abilities; discuss ways to advocate for, and with, students with dis/abilities and their parents.</td>

<td>According to HEATH, a national clearinghouse of data on the experiences of students with disabilities, students with disabilities are one of the fastest growing segments of the American college population. They contribute to the diversity of the campus and have used the higher education setting to ready themselves for independent living and competitive employment. In some cases, the college experience has also helped students forge a cross-disability collective identity as part of a distinctive disability culture. This course examines the experiences of students with disabilities in higher education and key issues related to their full and equal participation in all aspects of college life, including: the historical experiences of students with disabilities in U.S. postsecondary education including demographic trends; key transition issues of students with disabilities from K-12 to postsecondary education; the legal and legislative context framing access and opportunity for college students with disabilities; understanding different disabilities and the reasonable accommodations they typically require in higher education settings; the deliberative and collaborative process through which reasonable accommodations are determined; implementing the principles of universal design in postsecondary curricula; the role of assistive technology in enhancing access; issues in the retention of college students with disabilities; challenges of college students with hidden disabilities; emerging populations of college students with disabilities; promoting the participation of students with disabilities in co-curricular and residential life; facilitating successful transitions to employment; faculty and staff development around postsecondary disability issues.</td>

<td>This course is intended to explore aging and disability from multiple theoretical and applied perspectives utilizing an interdisciplinary approach. Students will be encouraged to explore the dynamics of aging and disability from a person-centered, lifespan and systems perspective. Students who successfully complete this course will be able to apply the knowledge to enhance service delivery to a specialized population, assume leadership in the aging and disability fields and support advocacy efforts as professionals and citizens.</td>

<td>Disability Studies can play a valuable role in the education and daily practice of human services professionals. This course provides opportunities for students to embody the values and principles and test the knowledge and skills they have learned in the classroom in an applied setting. Their fieldwork activities will support the goals of inclusion, integration, and independence of people with disabilities consistent with the legal mandates contained in IDEA, the Rehabilitation Act and the ADA. Students will receive guidance from exemplary professionals at agencies that provide services to people with disabilities. Students who complete the course will: be knowledgeable about professional careers and educational opportunities in the disability field; participate in a person-centered planning process with an individual with a disability to</td>

identify their personal goals and strategies to achieve those goals; relate professionally and ethically to people with disabilities, families, other professionals and members of the community; demonstrate an awareness of the array of services, programs and agencies that support people with disabilities across the lifespan and across disability categories; develop critical observational, communication, interviewing and analytic skills to acquire specific and meaningful information related to people with disabilities; develop leadership skills in promoting policies and programs that integrate a Disability Studies approach into the provision of community-based services and supports.

DSAB 649 Independent Study 3 Credits
Prerequisite: None
Eligible students will have an opportunity to design and carry out an independent project under the guidance of a faculty member.

DSAB 651 Special Topics Course 3 Credits
Prerequisite: None
The following is an example of possible Special Topics courses:
The Recovery Model in the Treatment of People with Chronic Mental Illness

DSAB 699 Capstone Course 3 Credits
Prerequisite: None
This course, which should be taken in the student’s final semester, is an opportunity for the student to integrate and synthesize the body of knowledge acquired in courses leading to completion of the M.A. in Disability Studies. Students will work with the instructor to develop a multi-disciplinary capstone project that demonstrates the student’s command of subject matter and literature covered in the courses. The capstone may take various forms, including an independent or group research project; an annotated literature review; or a media presentation. All capstones must include an extensive bibliography and a 20-25 page analytic essay. Classroom sessions will alternate with independent supervised research and project development.
